

- 1- True about Neurotransmission receptors – receive signals that elicit an electrical response
- 2- Not in the synapse – axon hillock
- 3- Thalamus relays sensations to the – cerebral cortex
- 4- Cerebral cortex is derived from – telencephalon
- 5- Lesion in which part of the frontal lobe causes disinhibition – orbitofrontal cortex
- 6- Not a function of the limbic system – judgment and decision making
- 7- Not caused by a lesion in the frontal lobes – receptive dysphasia (removed)
- 8- Active in goal-driven positive emotions – nucleus accumbens
- 9- Goal-driven behavior is described as – conscious behavior
- 10- Social norms affect – intentional behavior
- 11- Wrong about emotions – usually are under individual's control
- 12- True about motivation – avoidance motivation is stronger than approach motivation
- 13- True about cognitive theory of emotions – emotions are the result of physiological arousal and cognitions
- 14- True about dopamine – tyrosine is precursor
- 15- Wrong about neurotransmitters – deficiency of dopamine leads to psychosis
- 16- Not a neurotransmitter criterion – once the transmitter is released into the cleft it stays there
- 17- True about neuromodulators – some satisfy the criteria of neurotransmitters
- 18- Not a neurotransmitter – angiotensin
- 19- Wrong about genetics of schizophrenia – risk in the general population is 3%
- 20- Wrong about genetic inheritance of psychological diseases – family environment is very important for personality determination
- 21- Wrong about intelligence – can be increased by 30 points with good education
- 22- Irrelevant to IQ – order of birth
- 23- True about intelligence – most differences are interracial
- 24- True statement – projective tests assess unconsciousness
- 25- Not a defense mechanism – re-realization
- 26- Not an important cue for eating – age
- 27- True about eating regulation – distention of the stomach activates VM hypothalamus
- 28- Wrong about obesity – are least sensitive to taste
- 29- Wrong about the sick role – patient is not obliged to seek medical help
- 30- True about sick role and illness behaviour – some can be generated from fear of sickness
- 31- True about a seven-year old perception of death – other people can die, but he cannot die
- 32- True about a four-month old infant as a developmental sign – social smile
- 33- Can ride a two-wheeled bicycle at – 6 years
- 34- Object permanence is related to what cognitive development stage – sensorimotor
- 35- True about formal operational stage – abstract thinking
- 36- Not a developmental stage according to Freud – intimacy vs isolation stage
- 37- Psychology is the study of – behavioral and mental processes
- 38- The personality theory that focused on unconscious – psychoanalytic
- 39- Understanding crossing the road as the plan to reach a goal is a – cognitive perspective
- 40- Explaining childhood amnesia with immature hippocampus is – biological amnesia
- 41-
