most dominant phase in menstrual cycle?  
luteal phase? the longest phase? does dominant mean longer?

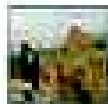

Like

Comment

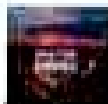

**Mohd Firdaus** I think dominant here means phase that occur for real by which when it happen we are very sure the cycle is on....so menstrual phase

21 March 2015 at 15:43 · Like 2

**Abeer Al-Hamdan** What i know that he didnt meant tge longer phase  
And even if the longer  
Luteal phase is not always the longer phase because ovarian cycle differ between individuals ... See more

**13) Cryptorchidism happens when:**

**The testes don't descend properly to the scrotum**

**14) All are true about testosterone hormone except:**

**Its levels increase during fetal life then reaches zero on birth and increases during puberty**

**15) All are considered causes of impotence except:**

**Sterility**

**16) The ovum:**

**Is important in the cyclic action of the uterine**

**17) The wrong statement regarding the human**

**chorionic gonadotropin is:**

**It is released by the corpus luteum**

**18) The safe period of a menstrual cycle of 35 days is**

**Day 25-35**

**Abeer Al-Hamdan**

21 March 2015 · 🌐

A question about testosterone and asked for the wrong statement :  
choices

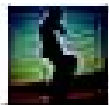

1. descending of the testes to scrotum
2. It is never zero level
3. Testosterone is in the acrosome

The answer is : 3
